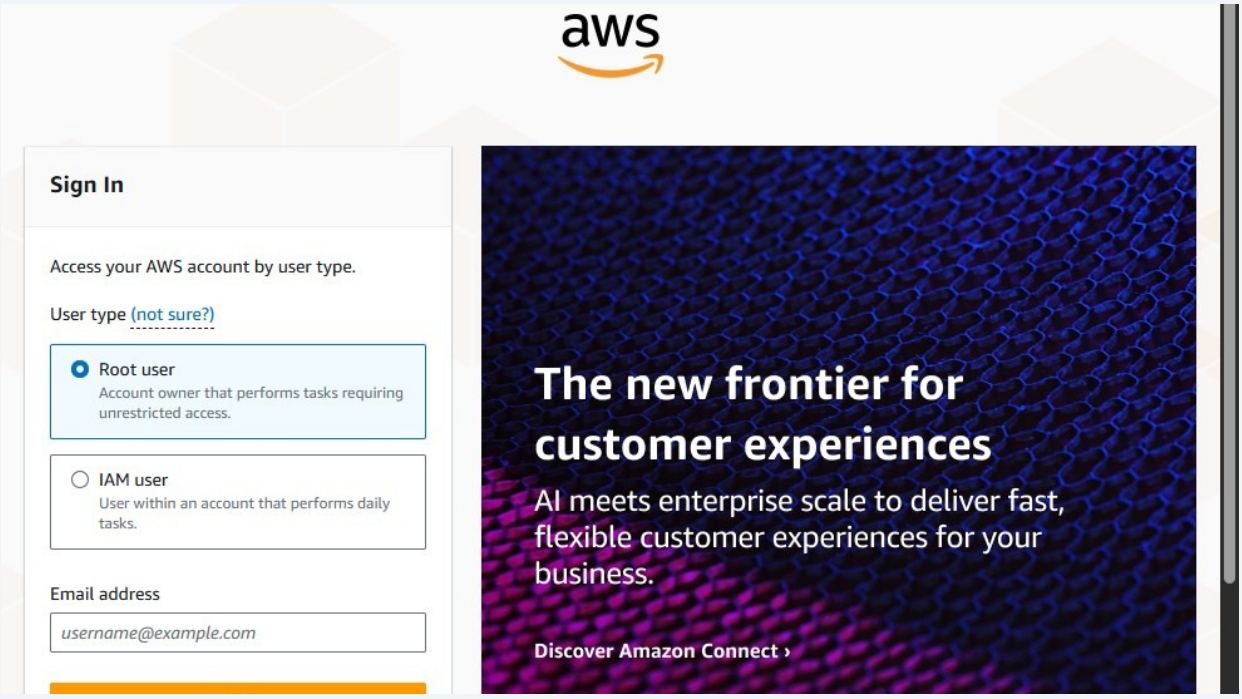
How To Create AWS Users And Groups

Scribe

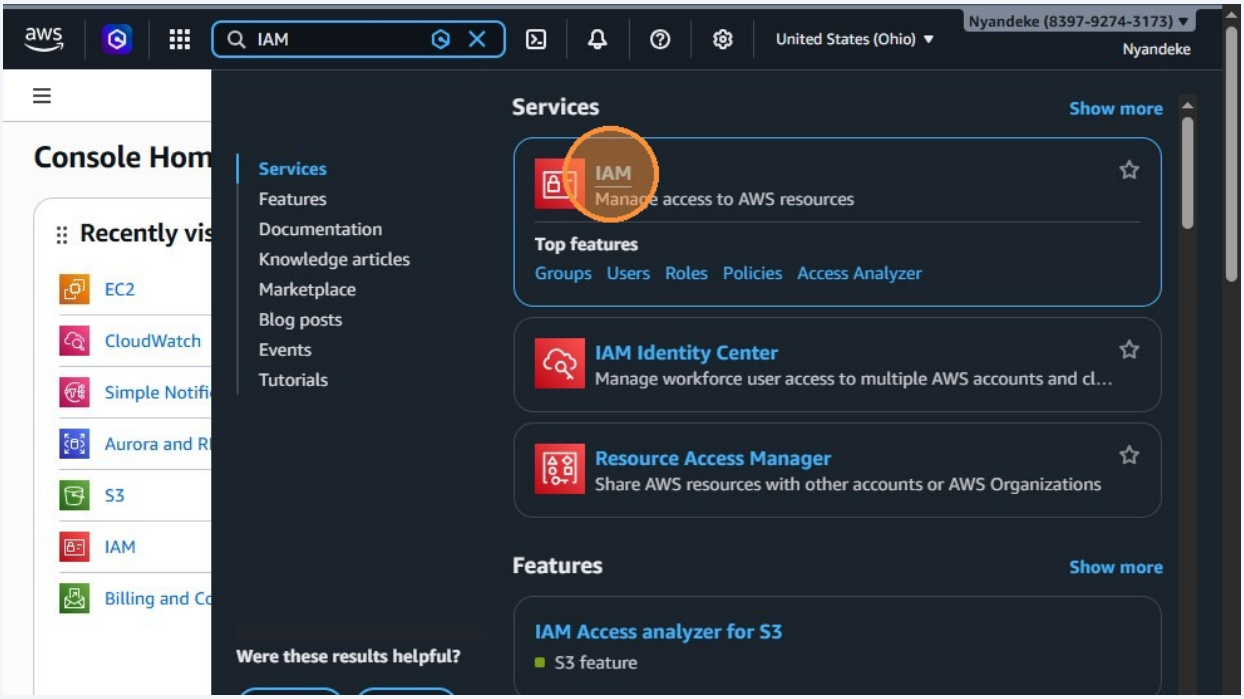
Learn the essential steps for setting up new IAM users and organizing them into groups within the AWS Management Console. This guide helps you manage access permissions efficiently by following security best practices.

1 Navigate to https://signin.aws.amazon.com/ and log in as a root user

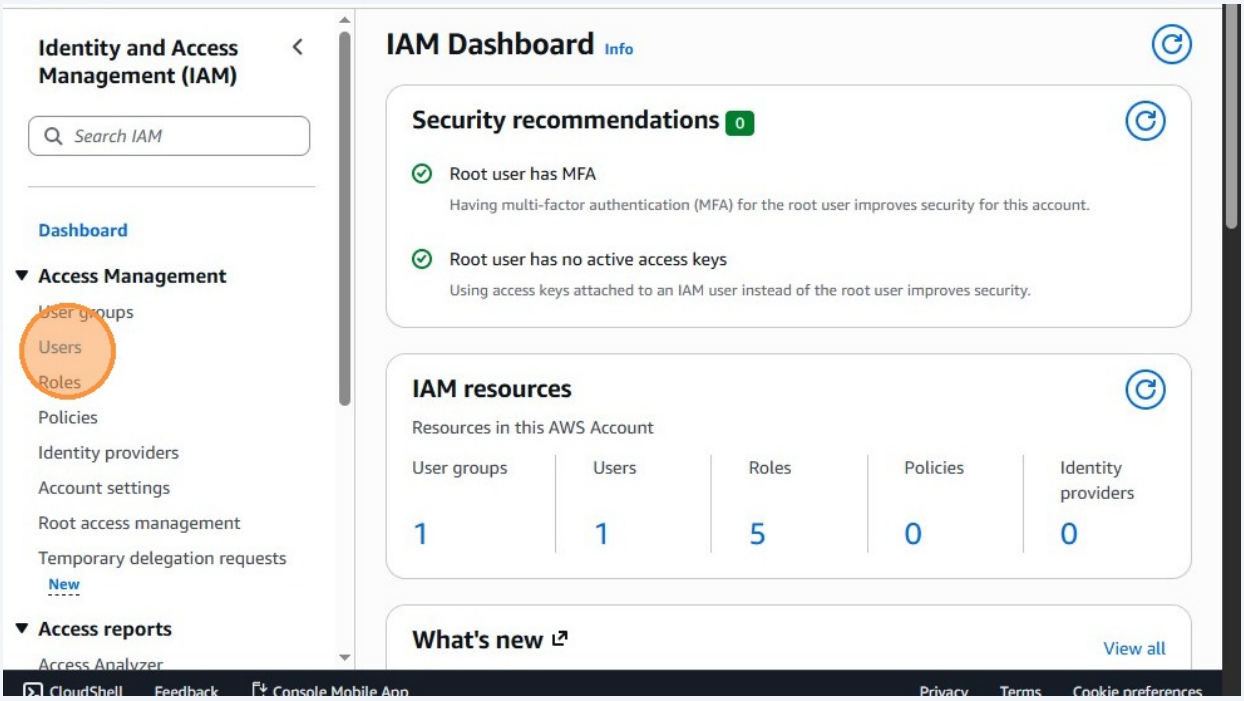


2 Type "IAM"

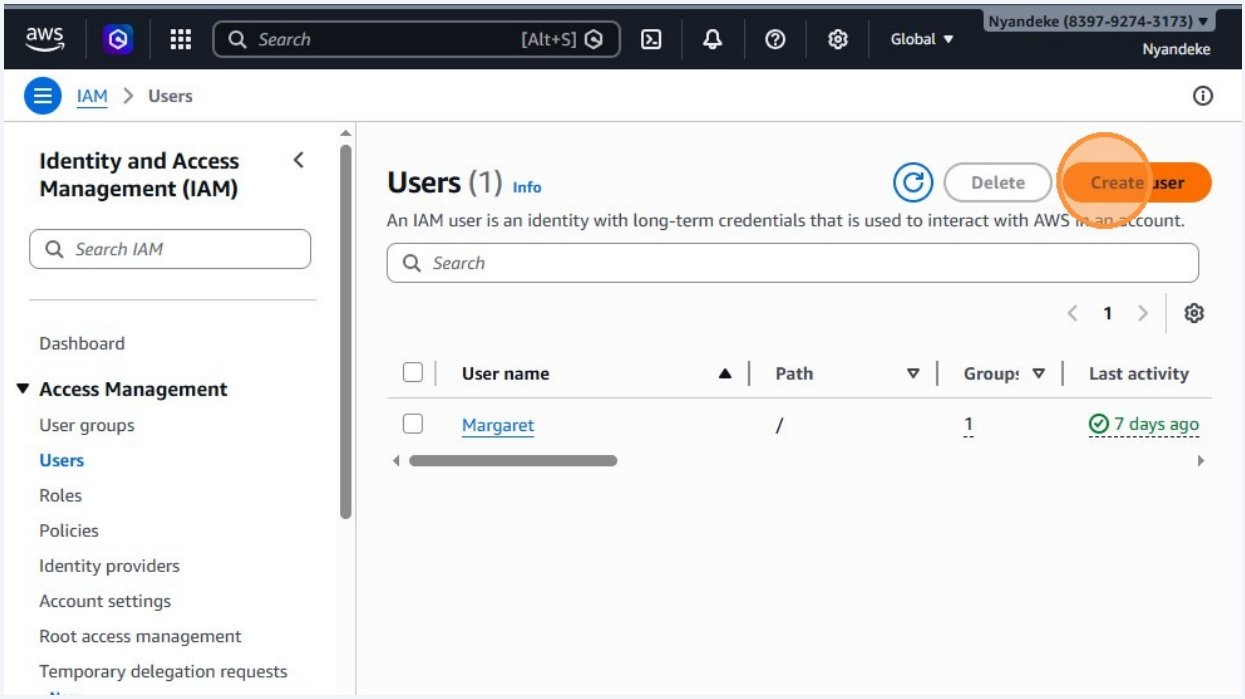
3 On the "search bar" type and click IAM.



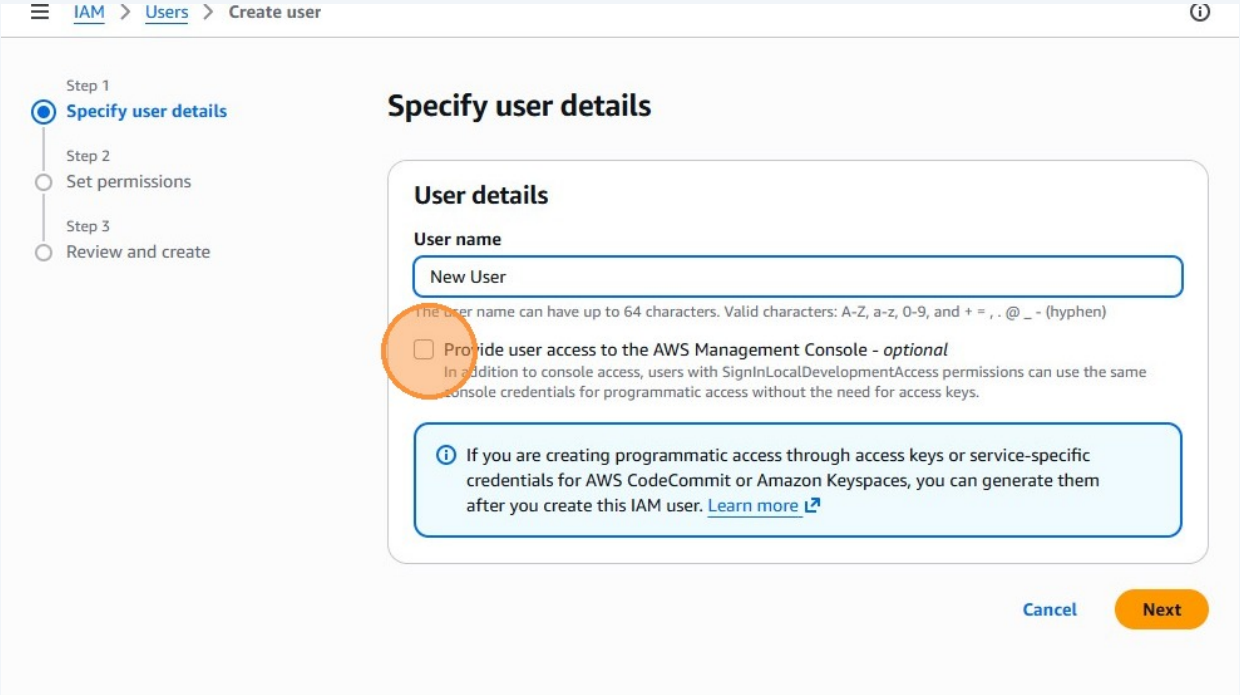
4 Click "Users"



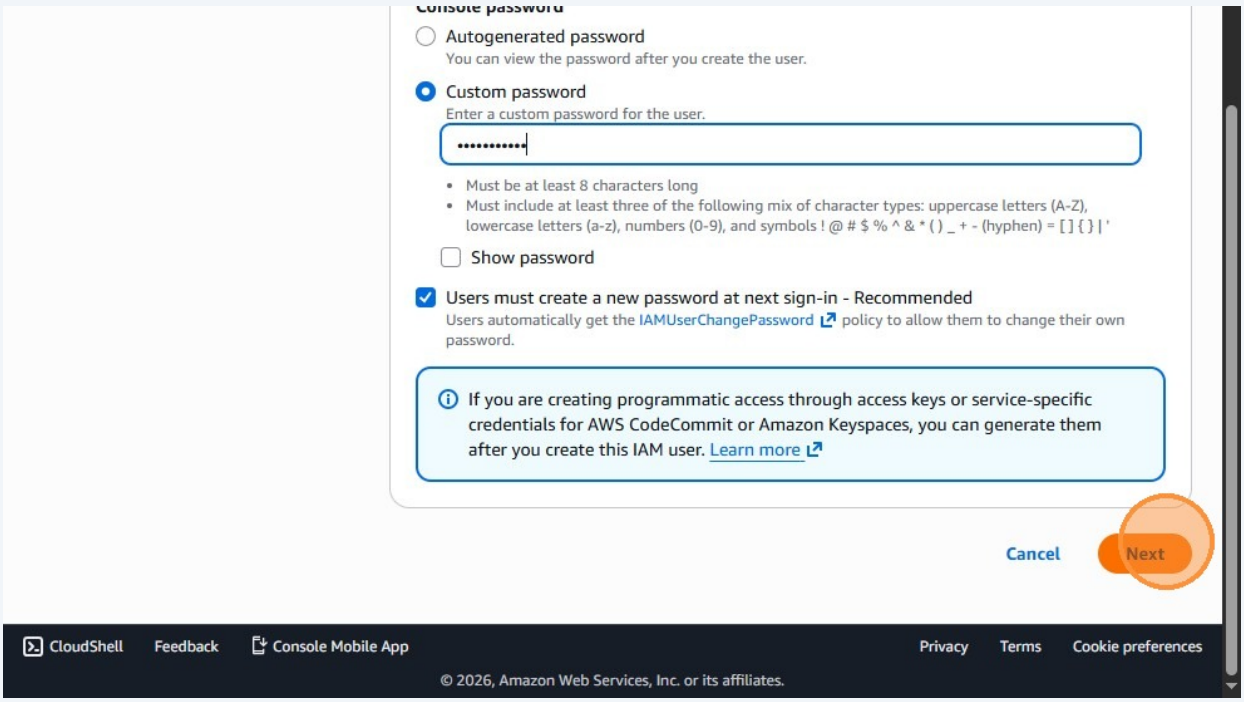
5 Click "Create user"



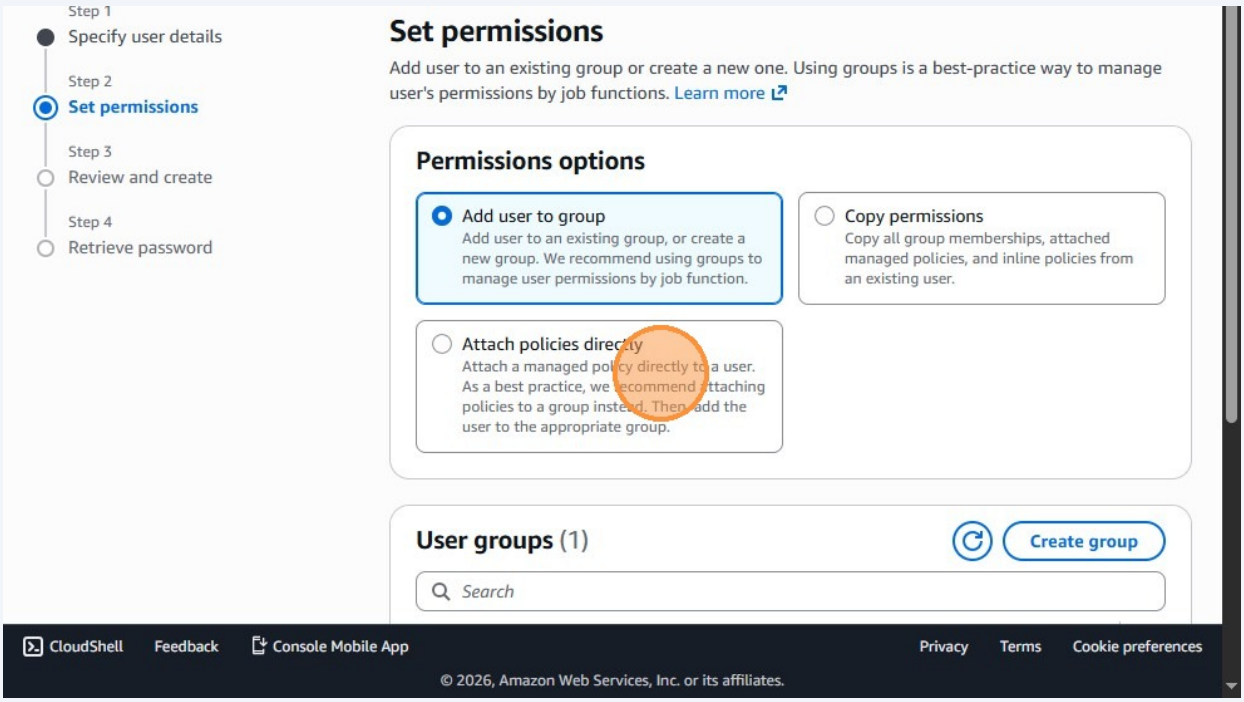
6 Give the user a name and check the box to provide a user with management console access then click next.



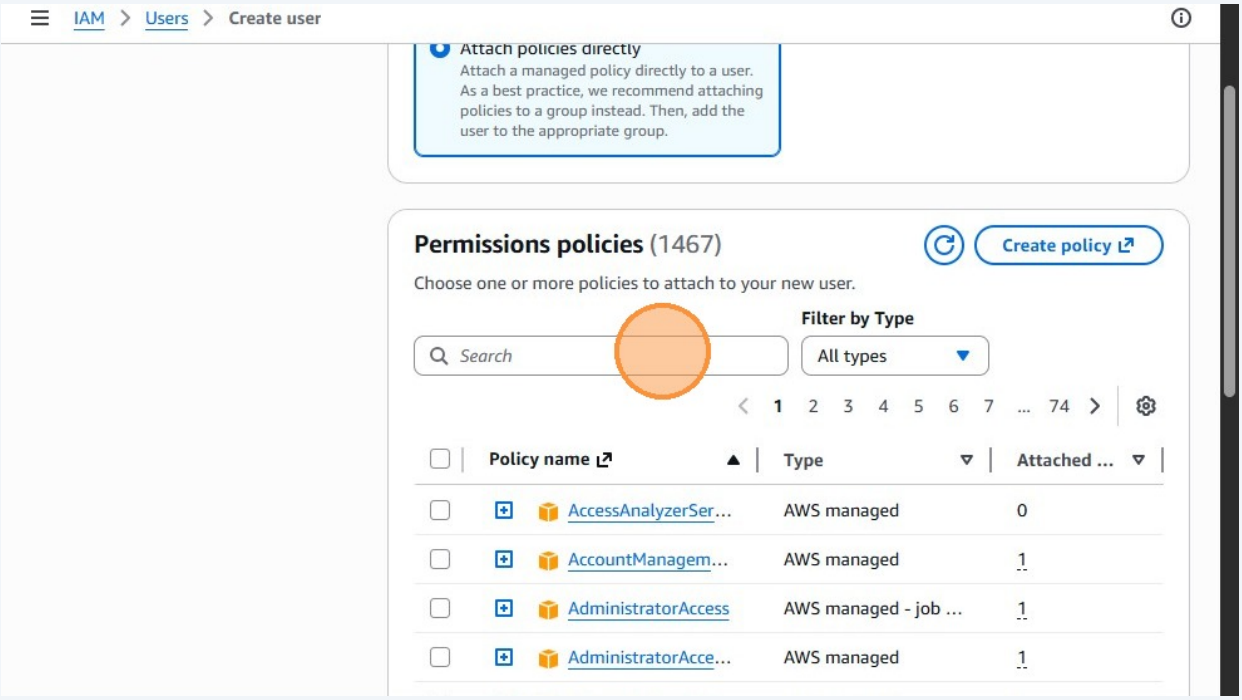
7 Create a custom password then check the checkbox so usera are required to create a new password when they sign in. Then click next



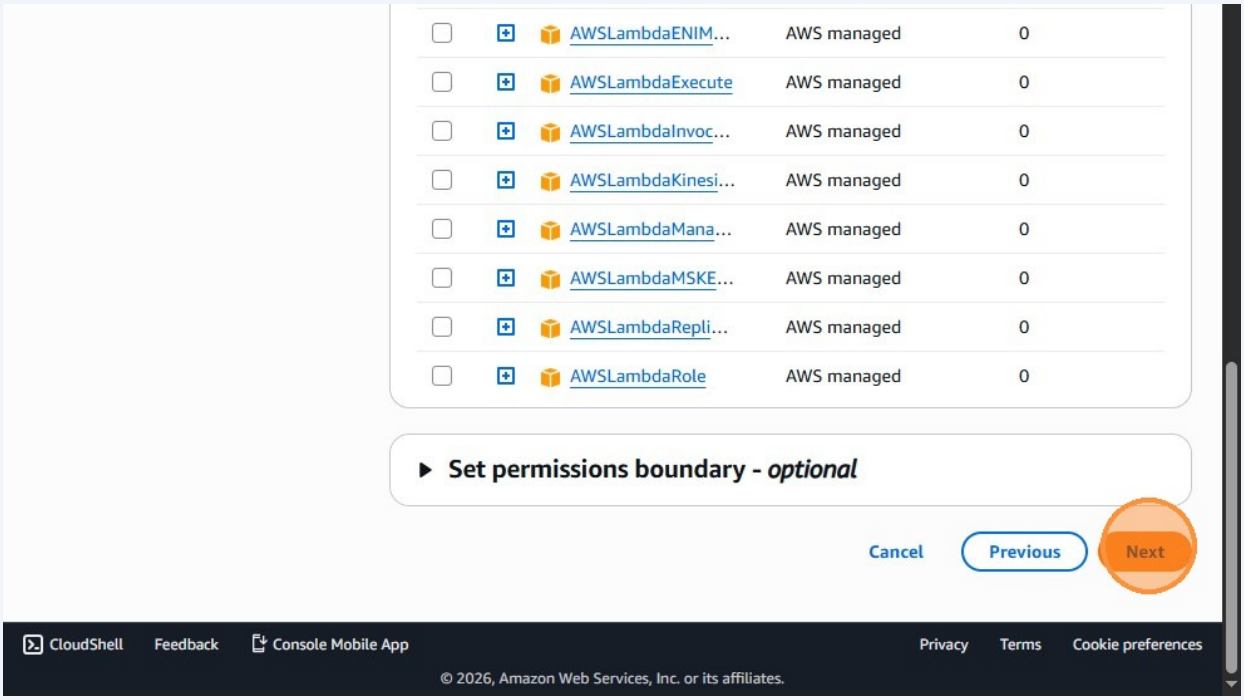
8 When dealing with groups, it is recommended to choose the default option "Add user to group" however when dealing with an individual as is our case, we shall proceed to "attach policies directly"



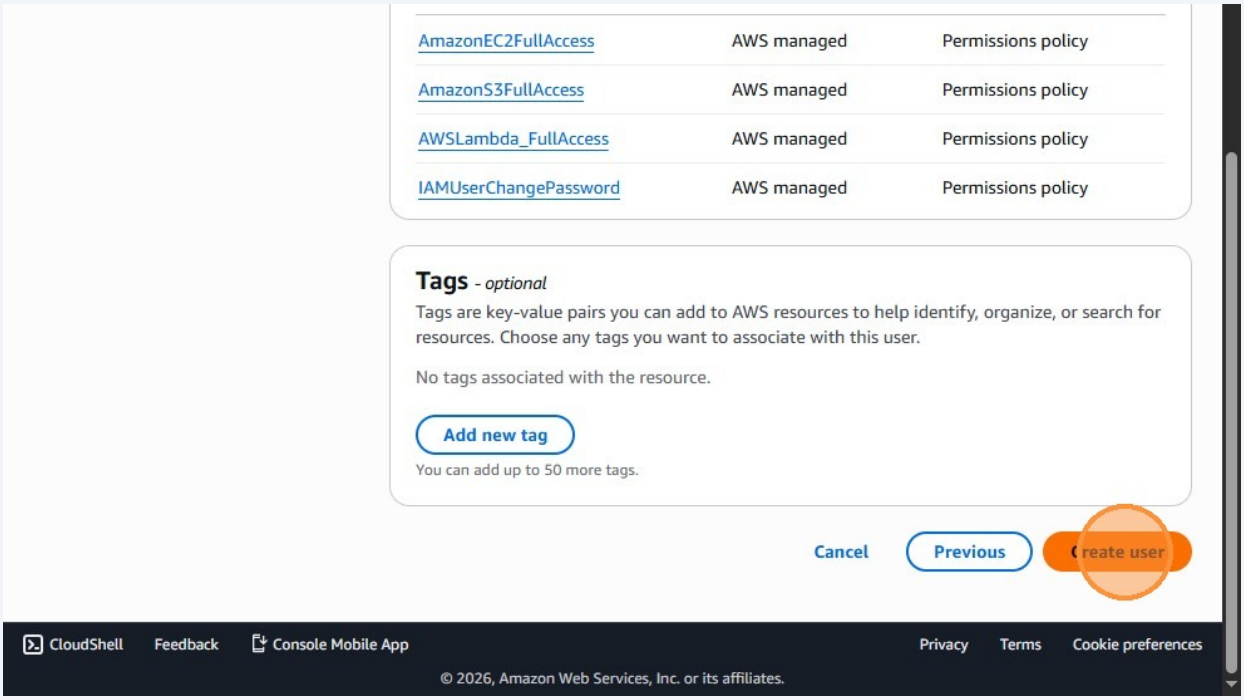
9 search the policies you want to assign to the user and select them then proceed to click "Next" at the bottom



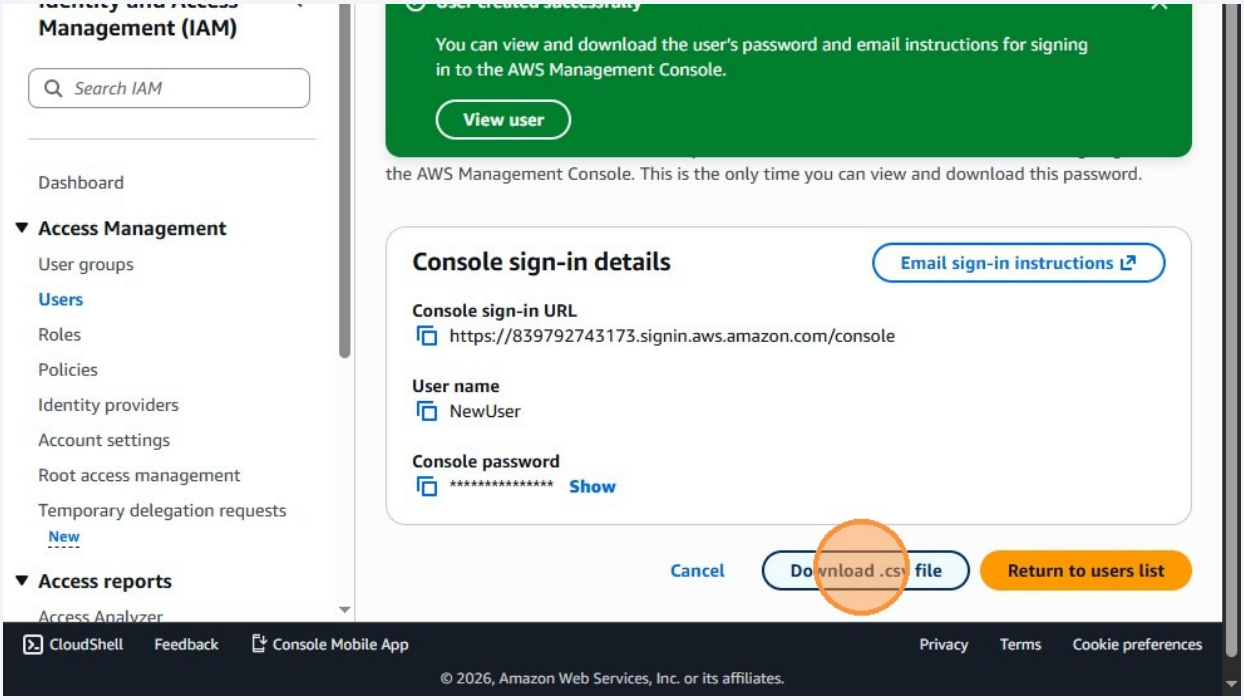
10 Click "Next"



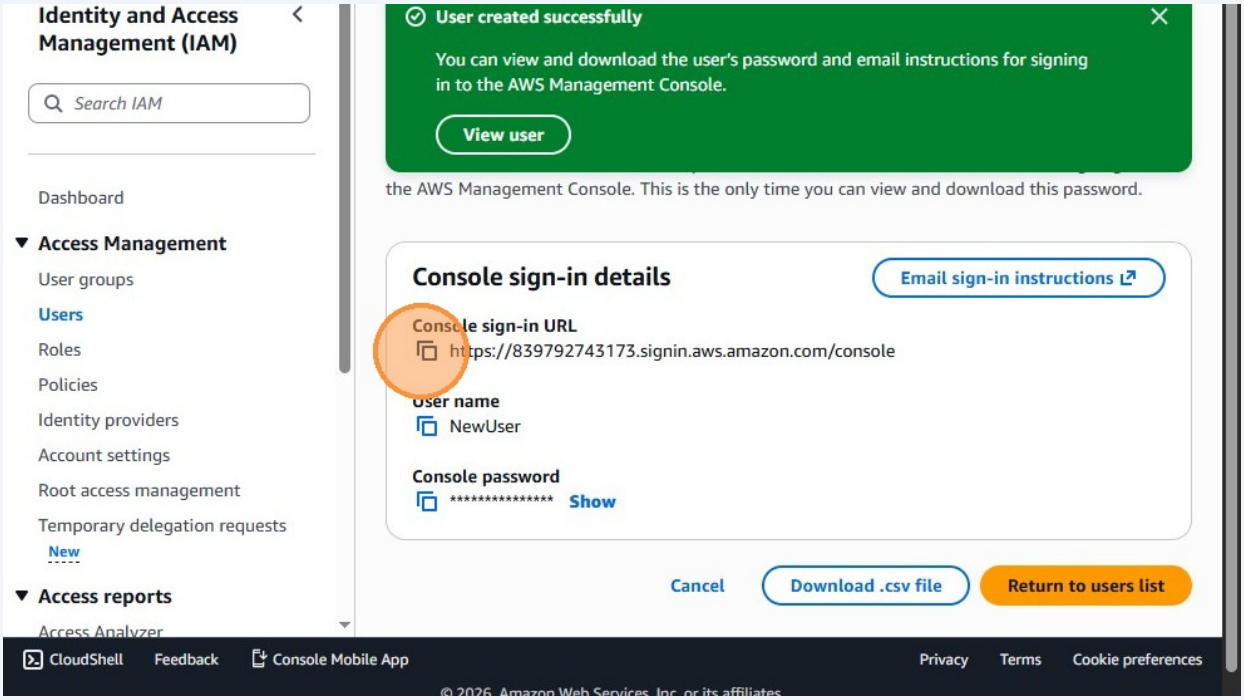
11 Click "Create user" to finalise the creation of a user.



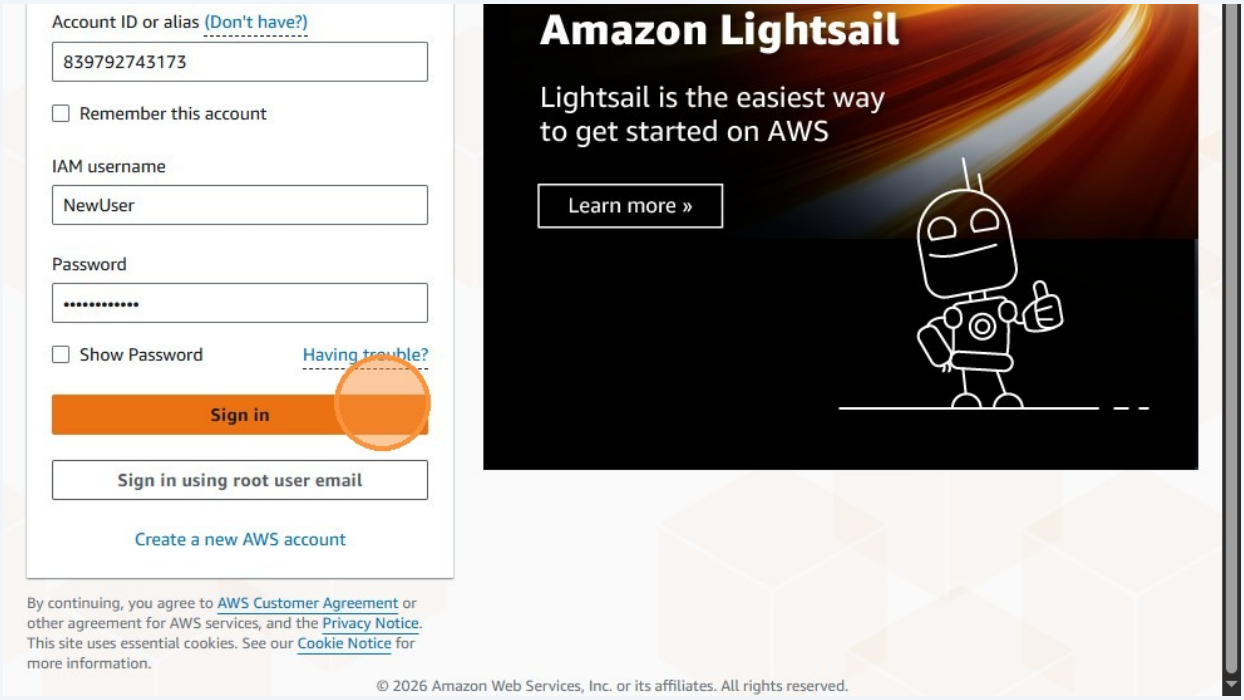
12 Click "Download .csv file" to save the credentials we have assigned our user.



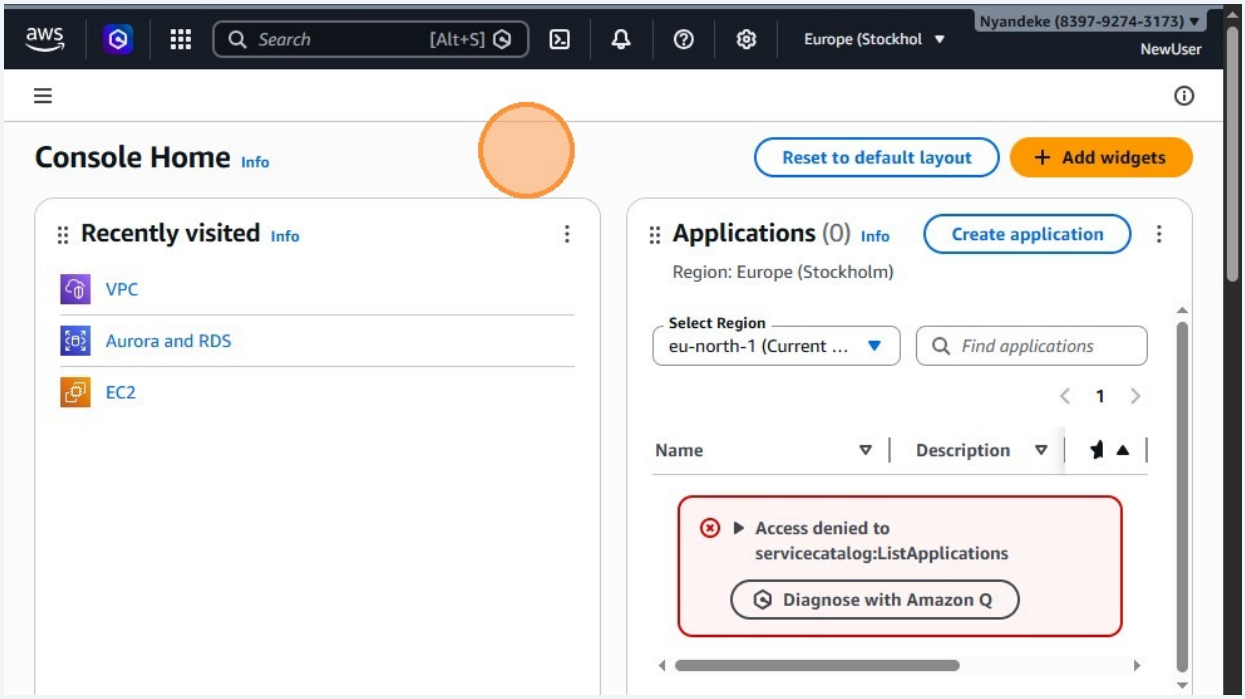
13 To confirm if our user account has been created, copy the URL and fill in the user name and password when prompted.



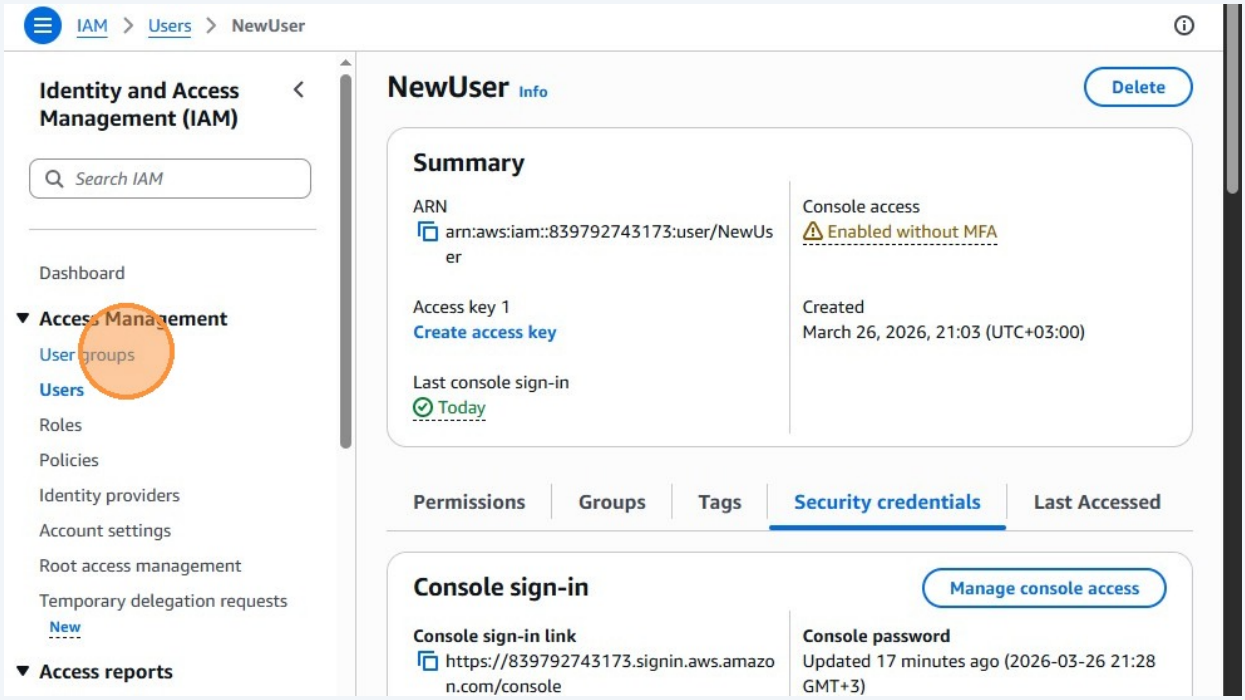
14 We are "Signing in" as an IAM user, the Account ID is filled automatically when we use the URL we copied previously.



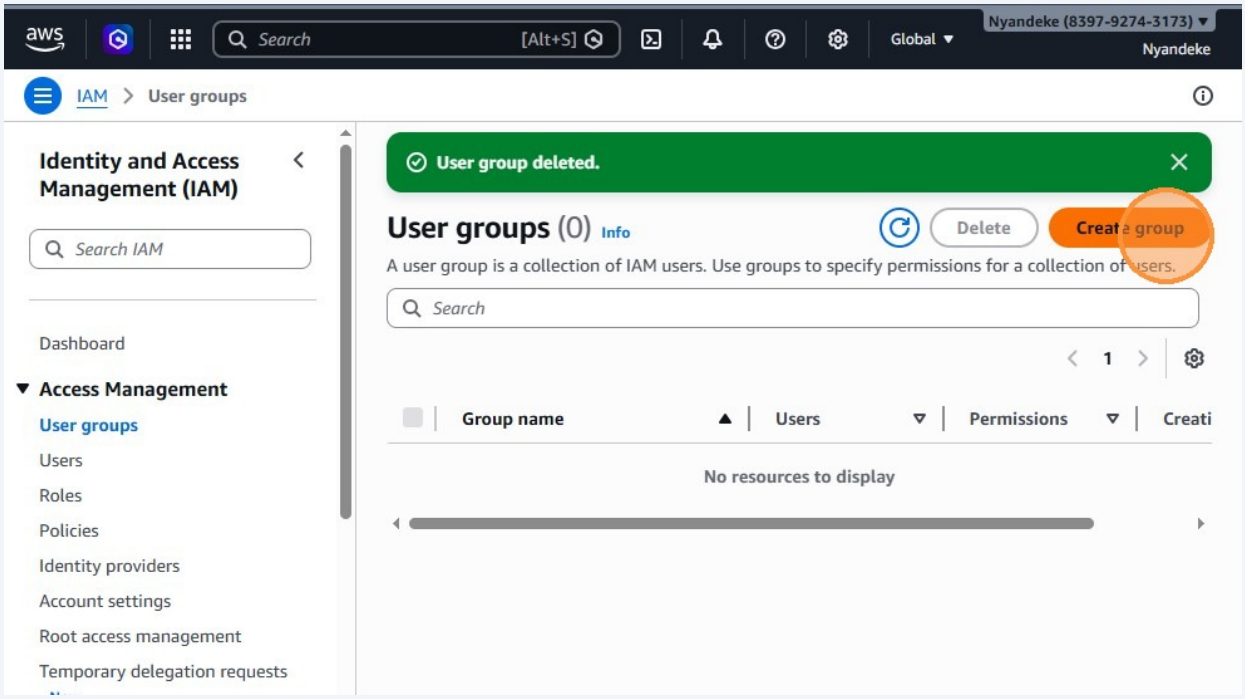
15 Our user account creation was a success as we were able to sign in.



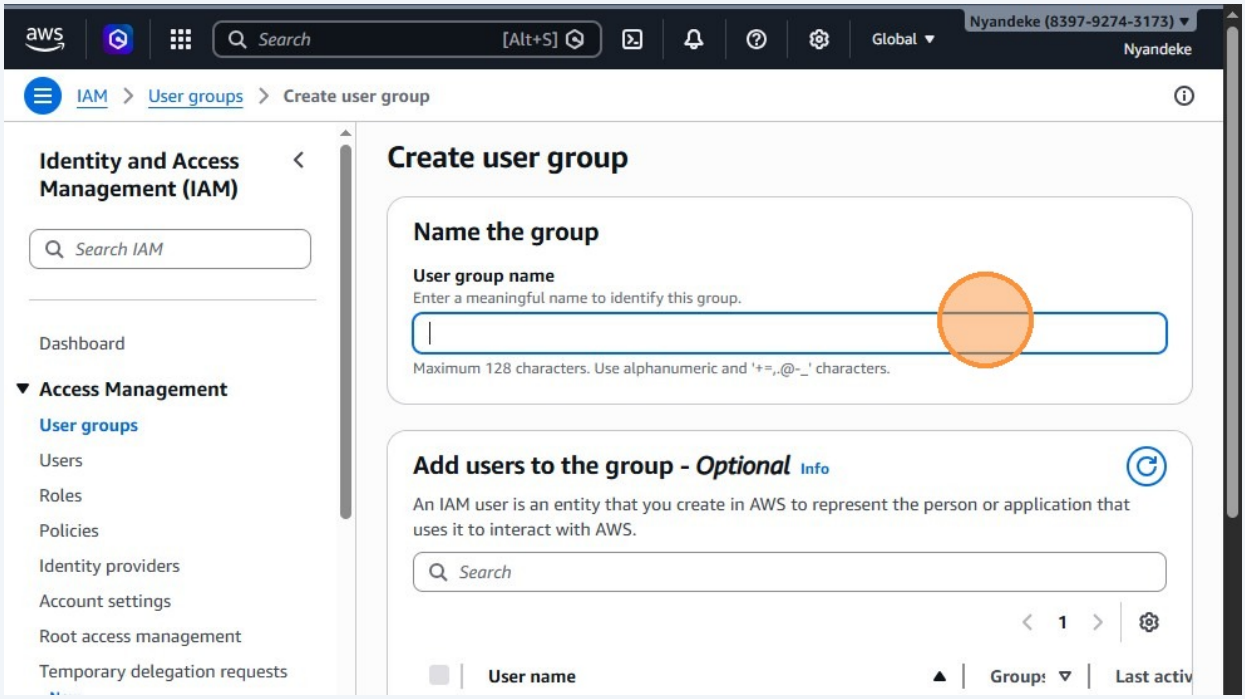
16 Now lets go back to our root account and create a user group.



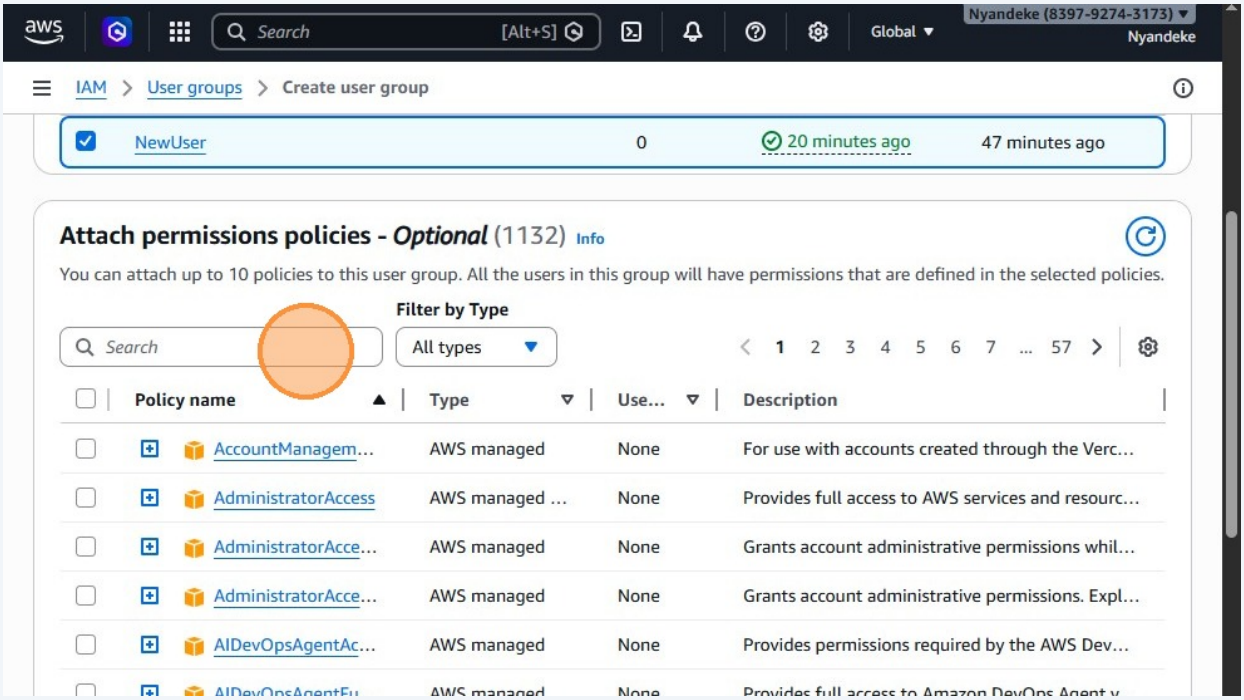
17 Click "Create group"



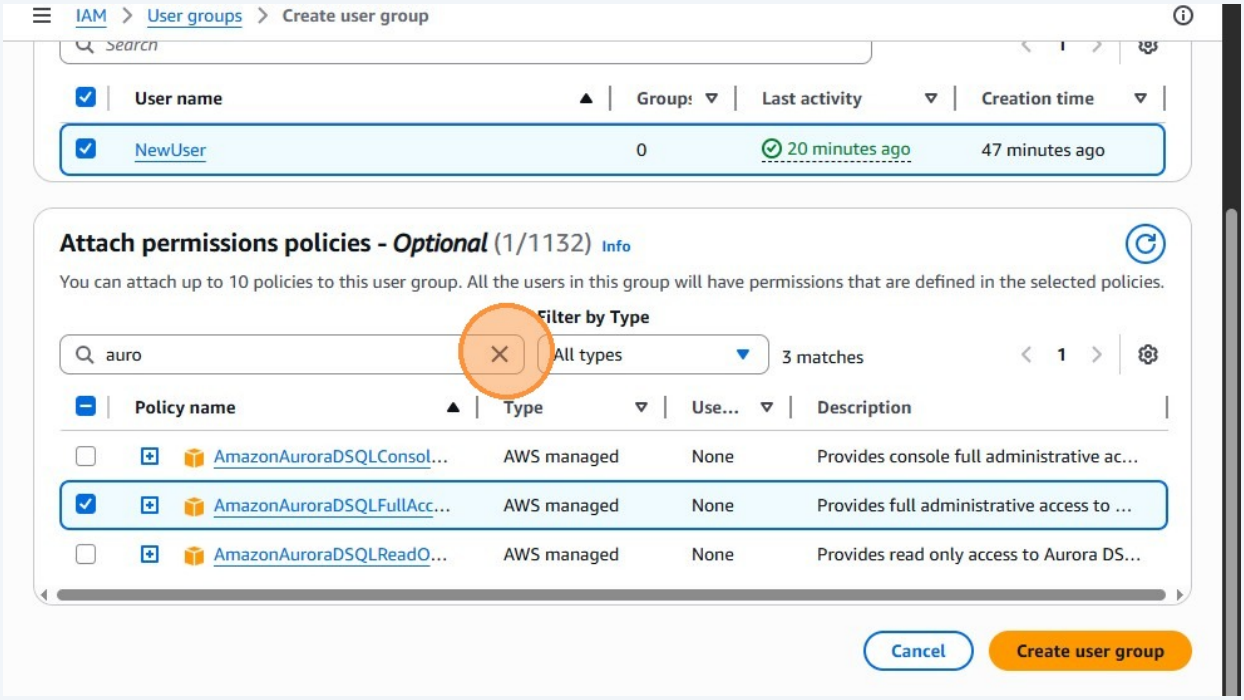
18 Click the "User group name" field and assign the name to your user group.



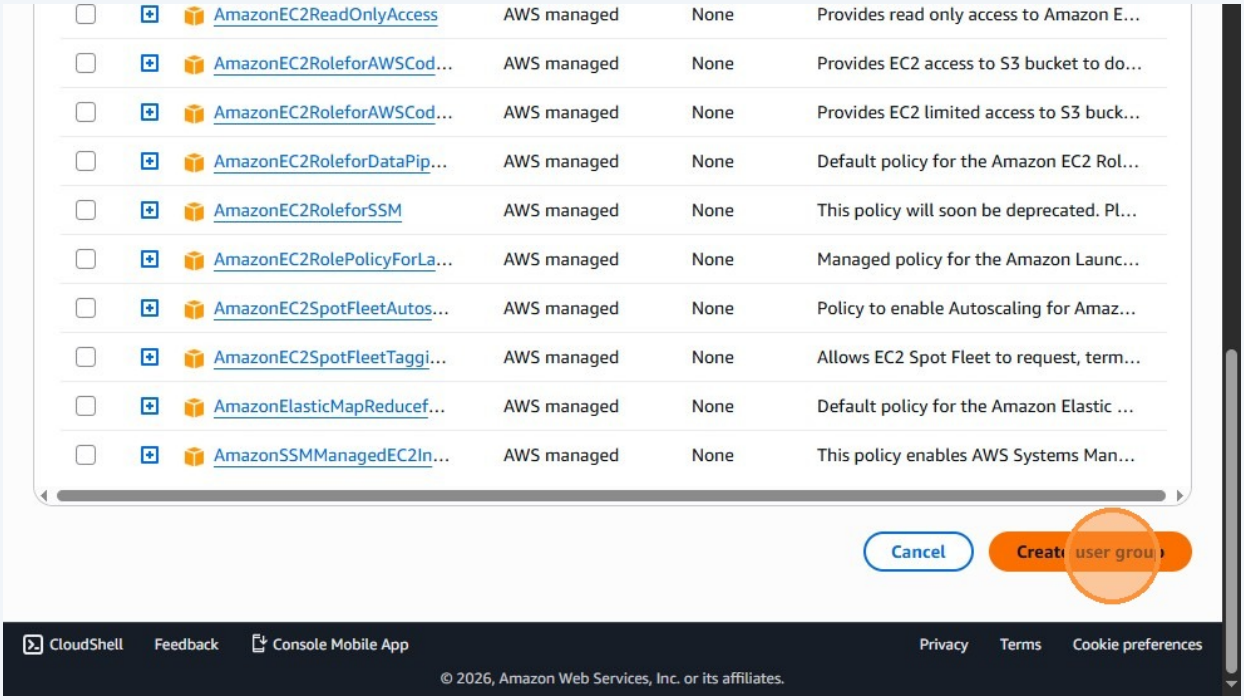
19 search permission policies to attach to this group.



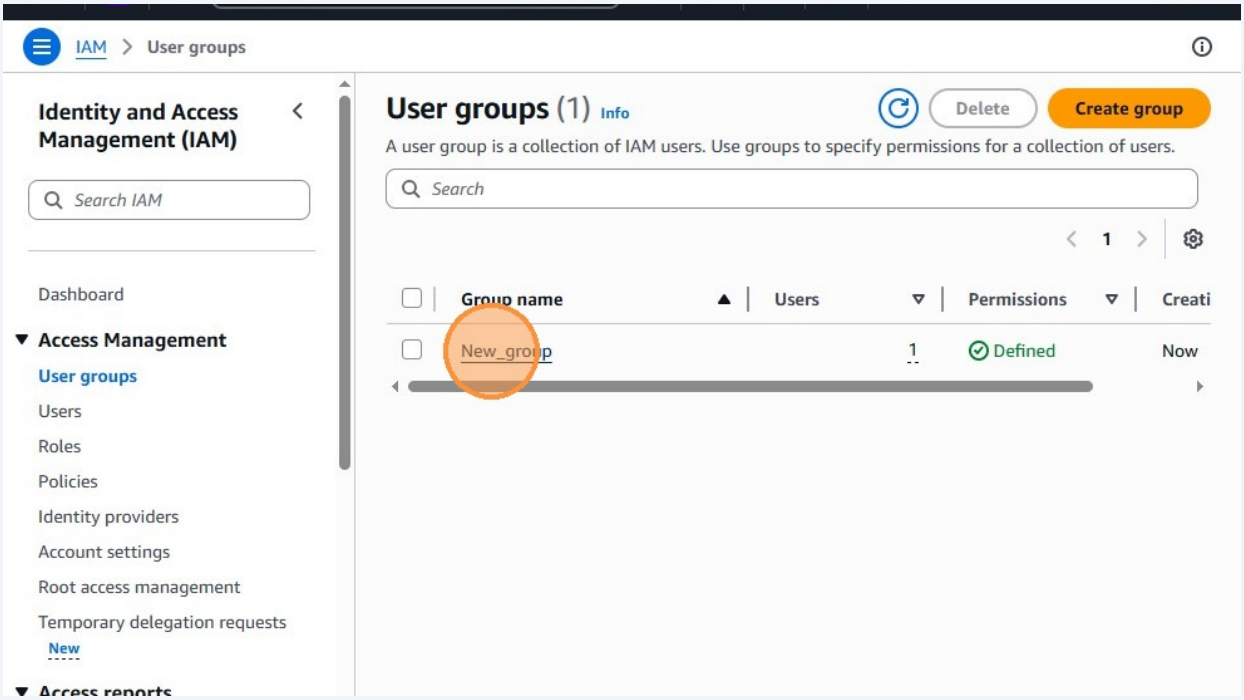
20 Click here.



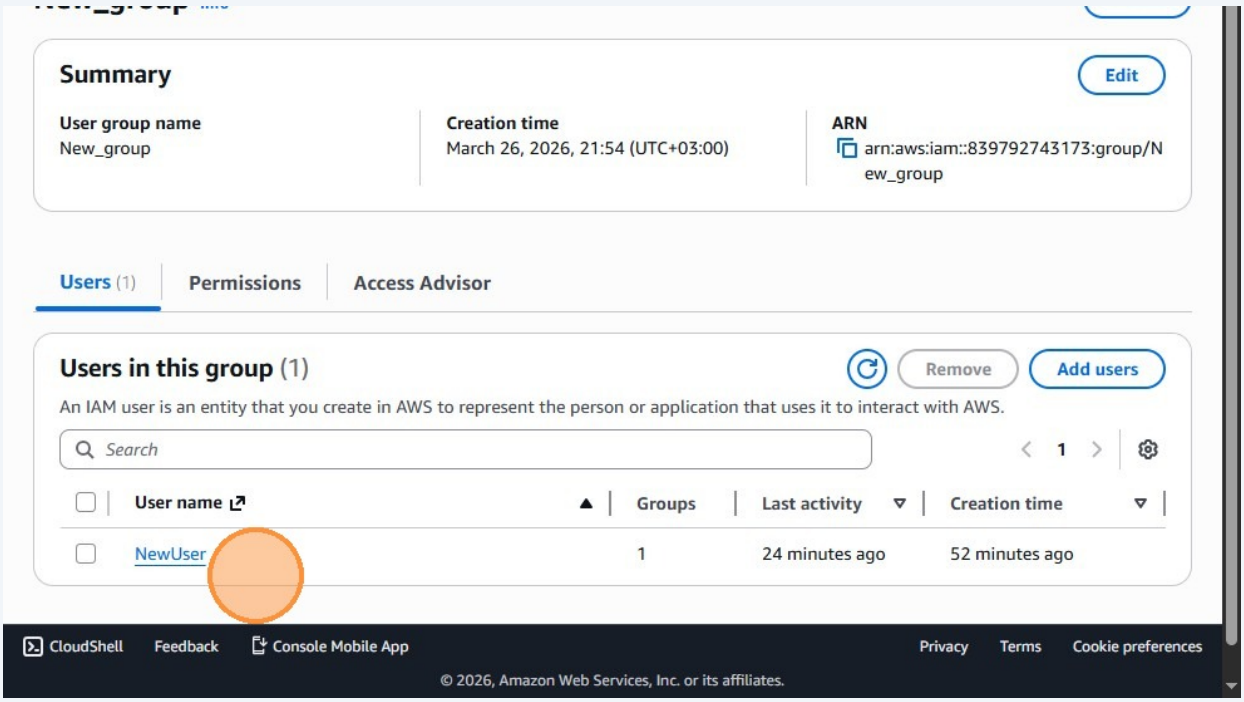
21 Click "Create user group" to finalise on creating a user group.

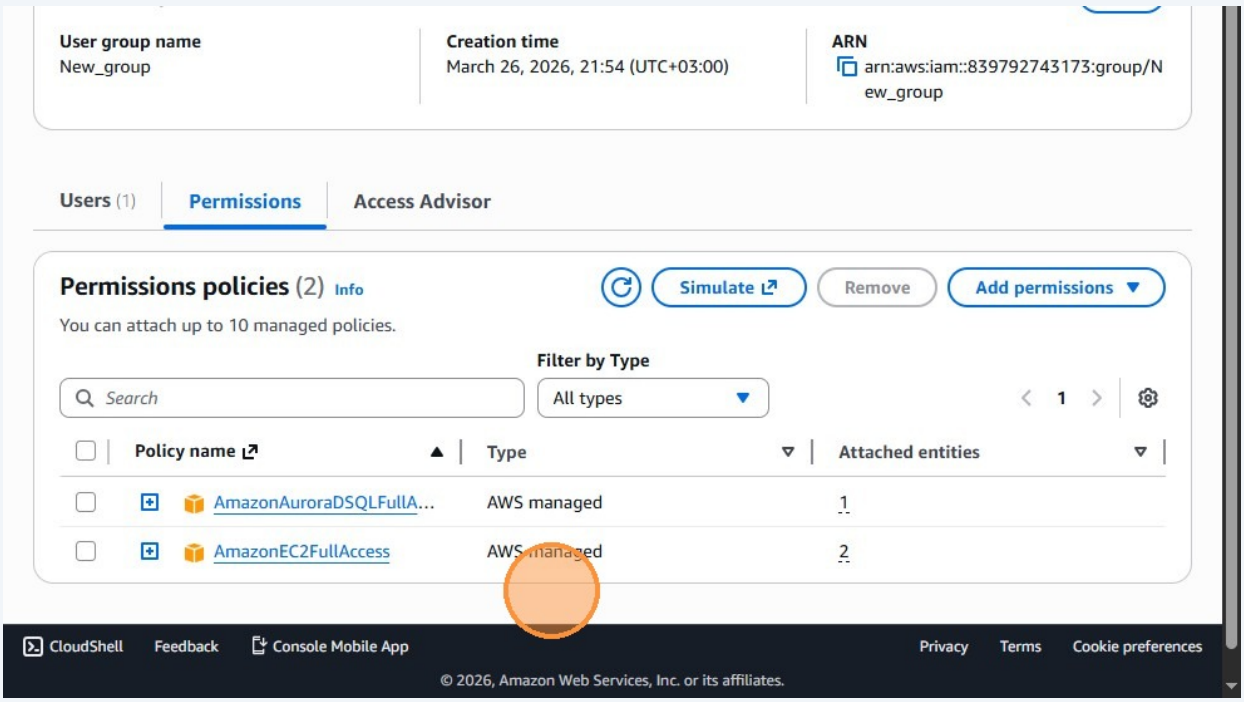


22 To check the permissions and users assigned to this group click it "New_group"



23 Click "NewUser" to access the permissions we have assigned the user from the created user group.





24 Click "Permissions" to display the permissions assigned to to the user.
